Hi Debbie, This case has transferred to Don Coulman but I was responsible for it. I got a call from the Examiner who said the abstract is missing in their files but it appears that they did receive it. She wanted our confirmation of what it was. It was:

A memory structure has a plurality of row conductors intersecting a plurality of column conductors at a plurality of intersections. Each intersection includes an electrically linear resistive element in series with a voltage breakdown element.

Could you please fax this abstract to Examiner Jennifer Dolan at 571-273-1690 (fax) today? Thanks. Her phone no. is 571-272-1690 (slight different in prefix) if there are any questions. Thanks again - Tim
